Integral - Integrated Credit Card Processing for Microsoft RMS and POS 2009.

Integrated Credit Card Processing
for Microsoft Dynamics RMS and Microsoft
Dynamics POS 2009.

Advantages of Integral Credit Card Processing:

More accuracy, as the system is fully integrated with RMS/POS 2009. When you select credit card as the payment type it preloads the chip and pin with the values.

One Receipt printer, so less boxes/cables on the sales desk.

Uses the tills broadband connection, so it doesn't tie up a phone line.

It's much faster than a phone based PDQ, typically processing a transaction in a third of the time.

You are no longer paying an 0845 dial out for each call, and can save on line rental if you no longer need a second line.
